Intermediate Shimura quotients with gained good reduction

Let D, N be coprime and squarefree, with $D > 1$ a product of an even number of primes, and put $W = W_{DN}$. The table classifies all positive-genus quotients $X_0(D;N)/H$ with $0 < H < W$ for which the Jacobian gains good reduction at a prime dividing DN. The candidate pairs are the squarefree N rows in Nualart Riera, Proposition 4.1 (source NR15), together with the positive-genus full quotients in Padurariu–Park–Voight, Table 7 (source PPV).

For $D \mid M \mid DN$, a classical sign character ϵ is converted to the geometric Shimura character by reversing its signs at the primes dividing D. The level-M factor is retained exactly when that geometric character is trivial on $H \cap W_M$. A prime $p \mid DN$ is in p_J exactly when every retained factor with $p \mid M$ is lacking.

There are 606 rows on 170 pairs (D, N). Generators for H are the canonical reduced-row-echelon basis relative to the increasing primes dividing DN.

Table 1: Positive-genus intermediate Shimura quotients with a gained prime.
